Global Solutions Lab

Designing solutions for global and local problems

Dear Global Solutions Lab Participant or Applicant,

As we mentioned in our first update, the Global Solutions Lab starts in late June. We still anticipate that by then the coronavirus pandemic will have abated to the point where it is safe to hold relatively small educational gatherings such as the Lab. If that changes, you will be the first to find out.

In the meantime, we will proceed as if the Lab will be happening in June and continue sending you a wide variety of reports and links on the subject matter of the 2020 Lab, as well as other information on the general state of the world. We will also be sending you information on the Lab itself— including travel, logistics, and scheduling info.

Below is the **second** of a series of messages dealing with climate change. The next email will deal with possible options and solutions for dealing with climate change.

Climate change is not (just) about climate. It impacts, and potential strategies for dealing with it, are in many areas.

NOTE: The attached PDF (at the bottom of email) is the latest climate change report from the World Meteorological Organization. It is one of the best, most comprehensive and concise reports on the state of the world's climate. Please look it over.
